Coding and Keyboarding over the Summer

I encourage the students to practice keyboarding over the summer. Grades 3-8 have accounts on typing.com.

As for coding the website I have been using is studio.code.org. There are other free coding websites the students are welcome to try also such as codecademy.org, crunchzilla.com and scratch.mit.edu

WEB SITES

clmatekids.nasa.gov
coolmath-games.com
funbrain.com
studio.code.org
safekidgames.com
turtlediary.com
typing.com
mrnussbaum.com
abcmouse.com

Have a Super Safe Summer!!!

If you have any questions please email me at: stammingerl@sjgschool.org

Technology Misconceptions

Software compatibility issues keep arising so I want to clear the air. Although school's edition of Microsoft Office is 2003 we are able to open any program done in a later

version. I explain this to the students but I continuously hear from students and/or teachers that we can't do that. So please keep that in mind if your child tells

you they can not work on something at home because it won't open at school. Unless the file is corrupt we can open it.

Special points of interest:

If you have ink cartridges to get rid of please send them to the office and I will give them to CartridgeWorld for a credit to our school account.
